

Elior Mangistu

Software Engineer | Full Stack Developer

Beit Dagan, Israel | 058-571-1223 | eliormangistu@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Software Engineer with hands-on production experience building and maintaining enterprise-scale applications and distributed backend services using **C#.NET, Node.js, Angular, Vue.js, React, TypeScript, and SQL**. Experienced in owning features end-to-end, from requirements and architecture through implementation, testing, deployment, monitoring, and production support.

Strong background in **RESTful APIs, GraphQL, microservices, external system integrations, real-time communication, authentication, database optimization, caching, and CI/CD**. Experienced working with large-scale production systems, troubleshooting live incidents, improving performance, and collaborating directly with customers, product teams, managers, QA, and external technology partners.

Hands-on experience integrating **AI-powered capabilities** into production applications and using **Cursor, Claude, and other AI-assisted development tools** across development workflows. Fast learner with strong problem-solving skills and a proven ability to quickly adapt to new technologies and systems.

Experience

Software Developer | **Aman Group** | Petach Tikva

May 2024 – Sep 2025

Backend & Distributed Systems

- Built and maintained enterprise production systems for major clients, including **HOT Mobile, FOX, Mor Investment House, and Delek**, supporting large-scale applications and user populations.
- Designed and developed **RESTful APIs and backend services using C#.NET and Node.js**, including end-to-end data flows from database and external systems to frontend applications.
- Developed and maintained **microservices-based solutions** and integrations between internal systems and external third-party services.
- Designed API contracts and data structures for integration with frontend, mobile, and external applications.
- Worked with **GraphQL**, including queries and resolvers, for efficient data retrieval.
- Implemented asynchronous operations and background processing to prevent long-running requests from blocking the user experience.
- Worked with **WebSockets** for real-time communication and updates across multiple users and application components.
- Implemented pagination, filtering, and efficient data retrieval for large datasets.
- Applied design patterns, dependency injection, and software engineering best practices to maintain scalable and maintainable code.

Database & Data

- Worked extensively with **SQL Server, SQL, relational databases, NoSQL databases, and DWH environments**.
- Designed and optimized SQL queries using filtering, indexes, joins, and targeted data retrieval to improve performance.
- Worked with database **tables, relationships, views, triggers, stored procedures, transactions, indexes, and schema changes**.

- Retrieved and processed data from internal databases and external systems according to defined business requirements.
- Performed both read and write operations, including updating user-related information and preferences.
- Investigated and optimized slow database queries and reduced unnecessary database load.
- Worked with large datasets and focused on fast, accurate retrieval of relevant records.

Performance & Caching

- Improved application performance and reduced database load through targeted caching strategies.
- Retrieved frequently required data from the database once, stored it in cache, and reused cached results instead of repeatedly querying the database.
- Implemented client-side storage and caching using **LocalStorage, SessionStorage, and browser caching**.
- Used client-side state and cached data to improve responsiveness and reduce unnecessary backend requests.
- Applied lazy loading / dynamic loading so application areas and functionality were loaded only when required.

Frontend

- Developed production web applications using **Angular, Vue.js, React, TypeScript, JavaScript, HTML, and SCSS**.
- Built reusable UI components including forms, dashboards, tables, and application-specific components.
- Worked with **RxJS / Observables**, subscriptions, state management, Redux, route guards, HTTP interceptors, and form validation.
- Migrated a legacy **Angular 7 application to Angular 19**, replacing deprecated dependencies and improving maintainability and performance.
- Implemented lazy-loaded application areas to avoid unnecessarily loading functionality that was not required on the initial page.
- Translated Figma designs into responsive interfaces with attention to accessibility, validation, usability, and maintainability.

Authentication & Security

- Implemented and worked with **JWT/token-based authentication**, including token handling and expiration.
- Worked with authentication flows involving **user/device identification and verification**, including cross-referencing device/user information with login data before issuing and using authentication tokens.
- Implemented secure API communication and environment-specific authentication configuration.
- Worked with **roles, permissions, secure routing, CORS, HTTPS, secrets, and security best practices**.
- Reviewed and addressed common web application security considerations including SQL Injection, XSS, and CSRF.

CI/CD, Deployment & Production

- Worked with **GitHub Actions, GitLab CI, and Azure DevOps** to automate build, testing, and deployment workflows across environments.
- Worked with CI/CD pipelines that included automated build and test stages followed by environment-specific deployment.
- Managed production deployments through **IIS**, including versioning, configuration, monitoring, and rollback procedures.
- Worked with **AWS deployment environments** and CI/CD workflows.
- Maintained separate configuration, credentials/keys, and database environments for development, testing, and production.

- Used mock requests and test environments to validate integrations and application behavior before production deployment.
- Monitored production systems and investigated logs to diagnose and resolve issues.
- Performed production rollbacks and emergency hotfixes when required.
- Created dedicated Git branches for urgent production fixes and maintained them through review and approval processes.

Production Troubleshooting & Ownership

- Investigated and resolved production incidents involving internal services and external integrations.
- Diagnosed an issue affecting a **third-party payment integration**, where request parameters did not match the external provider's expected format; identified the root cause, implemented the correction, and validated the fix.
- Took ownership of production issues from investigation through implementation, testing, deployment, monitoring, and validation.
- Worked independently on urgent production fixes while maintaining code review and release processes.

AI & AI-Assisted Development

- Integrated **AI-powered functionality** into production applications, including conversational automation and dynamic content generation.
- Processed structured JSON responses from AI services and integrated generated results into backend and frontend workflows.
- Designed and refined prompt structures to improve response consistency and accuracy.
- Worked with **AI agents / agentic workflows and MCP-related integrations**.
- Used **Cursor and Claude/Claude Code** as AI-assisted development tools for coding, debugging, research, implementation, and problem solving.
- Applied AI tools beyond autocomplete, including using them to accelerate development and investigate technical solutions while maintaining independent engineering judgment.

Collaboration & Stakeholder Management

- Worked in cross-functional Agile/Scrum teams with **backend, frontend, QA, product, and management**.
- Participated in meetings with customers and internal management to understand requirements, priorities, and technical challenges.
- Collaborated directly with **external technology partners and their technical/data teams** to coordinate integrations and resolve issues.
- Worked with mobile developers to define API contracts and efficient data structures.
- Translated business and technical requirements into implementable software solutions.
- Communicated technical issues and solutions clearly across engineering, product, customer, and external stakeholder groups.

Technical Skills

- **Languages:**
C# · .NET · JavaScript · TypeScript · SQL · Node.js
- **Backend:**
.NET · Node.js · Express.js · REST APIs · GraphQL · Microservices · API Integration · Background Processing · WebSockets · Dependency Injection · Design Patterns
- **Frontend:**
Angular · React · Vue.js · TypeScript · JavaScript · RxJS · Redux · HTML5 · SCSS · Lazy Loading · Reusable Components

- **Databases & Data:**
SQL Server · SQL · PostgreSQL · MongoDB · DWH · Relational Databases · NoSQL · Stored Procedures · Views · Triggers · Transactions · Indexing · Query Optimization
 - **Cloud / DevOps:**
AWS · GitHub Actions · GitLab CI · Azure DevOps · IIS · CI/CD · Deployment · Monitoring · Rollbacks · Git
 - **Security:**
JWT · Token-Based Authentication · Authorization · Roles & Permissions · CORS · HTTPS · Security Best Practices
 - **Performance:**
Caching · Browser Cache · LocalStorage · SessionStorage · Database Optimization · Query Optimization · Pagination · Lazy Loading · Performance Tuning
 - **AI / GenAI:**
LLM Integration · Generative AI · Prompt Engineering · AI Agents · MCP · Structured LLM Outputs · Conversational AI · AI Automation · Cursor · Claude / Claude Code
 - **Engineering:**
Agile/Scrum · System Integration · API Design · Production Troubleshooting · Distributed Systems · Testing · Accessibility (WCAG)
-

Education

Fullstack Development Bootcamp | **Coding Academy** | Ramat Gan

Jul 2023 – Oct 2023 | 640 hours

Intensive full stack development program covering JavaScript, TypeScript, React, Angular, Vue.js, Node.js, Express, REST APIs, MongoDB, SQL, WebSockets, Git, and responsive web development.

Military Service

Clinic Manager | **Air Force, Medical Corps** | Rishon Lezion

Nov 2015 – Jan 2018

- Managed daily operations in a high-responsibility environment, coordinating staff, processes, and time-sensitive tasks.
 - Developed strong organizational, communication, leadership, and problem-solving skills.
-

Additional Professional Experience

2018 – 2023

- Various customer-facing, operational, and support roles.
-

Languages

- Hebrew — Native
- English — Professional Working Proficiency
